EDUCATION

International Information Technologies University, Almaty **June 2025**
Bachelor of Science in Computer Science

- Capstone project: Development and Research of an Intelligent System for Monitoring and Analyzing the Product Life Cycle Using Smart Technologies.

EXPERIENCE

Nimble **Dec 2025 – Present**
Frontend Developer
Dubai, UAE

- Built core guest payment flows end to end: a standalone tips page, full-bill payment, prepayment, and service-fee options. Also handled failed payments and two guests paying the same bill at once.
- Owned much of the app's money logic, including tips, processing fees (with an option for guests to cover them), fees on tips, VAT and bill totals, and fixed calculation bugs across the product.
- Built a self-service kiosk mode with a Paymob payment QR code that refreshes every 90 seconds, a countdown, and loading states.
- Localized the app into 3 languages with full right-to-left support for Arabic, and made each language configurable per restaurant.
- Designed a per-restaurant theming system and delivered branded themes for 3 clients.
- Built the Foodics POS integration pages (connect, redirect and confirm).
- Shipped features each restaurant can switch on: digital receipts with download, loyalty sign-up by phone with points earned, a promo banner slider, embedded third-party ordering, and dynamic surveys.
- Improved performance by cutting unnecessary re-renders, image optimization, and setting up nginx caching and gzip.
- Made the app reliable on real devices: fixed iOS Safari quirks, adapted layouts for large screens and kiosks.

Miracalyze **Dec 2023 – Sep 2026**
Frontend Developer
Almaty, KZ

- Built interfaces for 5 projects from scratch: 3 on Vite and React, and 2 on Next.js.
- Built production e-commerce storefronts from scratch in Next.js (App Router, server components, static generation), covering catalog, cart, checkout, accounts and content pages. The codebase was reused to launch multiple brands in different markets.
- Built complex checkout flows with map-based delivery, zone pricing, time slots, promo codes, loyalty points and multiple currencies.
- Integrated payment providers across regions: Stripe, PayPal and FreedomPay (Kaspi, Halyk and other local banks).
- Hardened authentication and API access with httpOnly cookie sessions, CSRF protection, server-side API proxies and one-time-code login.
- Improved performance through Core Web Vitals work, bundle-size reduction and a large-scale refactor that cut load time by 30%. Migrated builds to Vite, reducing rebuild time from 10s to 4s.
- Set up SEO and analytics: GA4 ecommerce events, UTM attribution, product feeds for Google Merchant, and structured data.
- Introduced ESLint and Prettier with custom rules and removed ~20% of legacy code.

Geeko Invest Ltd **Jun 2022 – Dec 2023**
Frontend Developer
Almaty, KZ

- Developed the frontend of an online brokerage platform in React, TypeScript and MobX.
- Migrated 10,000+ lines of JavaScript to TypeScript, reducing runtime errors and making refactoring safer.
- Moved data logic out of components into MobX stores, eliminating prop drilling and making state easier to test and reuse.
- Built a shared library of core UI components (forms, tables, modals), documented in Storybook and reused across the platform.

TECHNICAL SKILLS

Frontend: React, Next.js (App Router, server components), TypeScript, JavaScript, Tailwind CSS, SCSS, Material UI, Ant Design, shadcn/ui, HeroUI.
State & data: TanStack Query, Redux, Redux Toolkit, RTK Query, Zustand, MobX, Valtio, React Hook Form, Zod, GraphQL, WebSockets, axios.
Product: checkout & payment integrations, money logic (fees, tips, VAT), i18n & RTL layouts, multi-tenant theming, auth & API security.
Tooling: Vite, Webpack, Vitest, Jest, React Testing Library, MSW, Storybook, Sentry, Git, Docker, CI/CD, Core Web Vitals, SEO & GA4.
Languages: Russian (native), English (B2)
